imageRUNNER ADVANCE
C9000 PRO Series

you can

Canon

A hand is shown holding a white sheet of paper, which is slightly curved. The background is a vibrant, abstract composition of yellow and orange geometric shapes, including triangles and circles, creating a modern and dynamic feel. The lighting is soft, highlighting the texture of the paper and the skin of the hand.

Experience the next-level in high quality short-run colour with seamless workflow integration.

Develop every business opportunity.

Canon's expertise and heritage in professional printing has enabled us to create the most technologically advanced Light Production Series to date. Combining excellent image quality, high-end finishing and powerful workflow integration, it represents the next step in profitable production.

Powerful production credentials

Productivity sits high on the agenda of the imageRUNNER ADVANCE C9000 PRO Series. The series comprises of two engines, the C9070 and C9060, both designed to enable a quick and seamless introduction into your work environment. A capacity of up to 9,300 sheets on-line and print speeds of up to 70ppm in colour or black and white, epitomise the dynamic thinking behind these systems.

Add Canon's reputation for exceptional reliability, enhanced maintenance capabilities, and toner that can be replenished whilst printing and you find an engine with outstanding print-on-demand capabilities.

eMaintenance Advanced means less time ordering toner, less time querying invoices through auto meter readings and much higher device productivity with Canon's Remote Diagnostics.

Quality in every respect

Whatever the scope of each production project, the imageRUNNER ADVANCE C9000 PRO Series delivers quality levels that set it apart. Incorporating a wealth of image quality know-how, every job is produced with vibrant, consistent colours, crisp text and graphics. Diverse media handling capabilities and high-end finishing options – such as booklet making, professional punching and advanced folding capabilities – ensure that prints exceed the highest expectations.

Perfect for light production

Designed to play an integral role in Print for Pay, CRD and Commercial Print environments, the imageRUNNER ADVANCE C9000 PRO Series provides outstanding light production possibilities. Incredibly user-friendly operation means even the most complex projects are easy to deliver. It's also a highly dependable solution for quality on-demand proofing, speeding up project approval times.

Improve production versatility.

Finding a system capable of catering for a real diversity of short-run colour applications has never been more straightforward. The imageRUNNER ADVANCE C9000 PRO Series comprises two highly modular engines, enabling you to specify a device that meets your production, space and budgetary requirements.

Superb media handling and finishing

Provide your customers with a wealth of choice courtesy of the incredibly flexible media handling capabilities of these engines. Uncoated stocks, gloss media, a maximum standard paper size of SRA3 (or 330.2 x 487.7mm for irregular size), plus weights as thick as 300 gsm, provide extensive possibilities.

An array of finishing options stand up to scrutiny against even high-end production engines. Professional punching (21-hole plastic comb, twin loop, colour coil, velo bind, loose leaf and Pro Click), folding (Z-folding, inner-C, outer-C, double parallel and centre folding), inserting, and saddle finishing with trimming, are all easily achievable, allowing you to offer exceptional choice to your customers.

Simple yet sophisticated

From an operator's perspective, managing the daily workload couldn't be simpler. A huge adjustable and intuitive colour touch-screen makes even complex tasks easy to control. With the help of Canon's Workflow Program, you can use the imageRUNNER ADVANCE C9000 PRO Series to maximise the efficiency and effectiveness of your operation.

Integration with Canon's HELIX Production Workflow Solution enables significant, additional time and cost saving benefits, with features such as on-line ordering, job ticketing and payment, and direct integration with Variable Data Printing applications.

The imageRUNNER ADVANCE ColorPASS GX-300 RIP optimises engine and user performance to improve productivity and return on investment.

Double parallel Fold

A huge 10.4 inch adjustable and intuitive colour touch-screen makes even complex tasks easy to control.

Forward thinking means quality results.

The strategy behind the design and development of the imageRUNNER ADVANCE C9000 PRO Series emphasises quality in every conceivable area. Beneath the sleek and modern styling and beyond the exceptional short-run colour credentials, lies a depth of innovative thinking that sets a new benchmark in environmental responsibility.

Exceptional image quality

The imageRUNNER ADVANCE C9000 PRO Series incorporates numerous innovations that help deliver print quality of the highest level. Canon's toner system expands the colour reproduction area, providing exceptional fusing and gloss performance for the sharpest text and clearest graphics. Canon's proprietary ARCDAT* real-time calibration technology ensures colours are produced consistently, by automatically measuring and fine-tuning image density throughout every job.

Impressive prints

The image quality, extensive media handling capabilities and professional finishing possibilities ensure there's a significant range of applications to offer both existing and new customers.

Create eye-catching company brochures or stunning mailpieces using variable data techniques to drive home targeted messages. Deliver on-demand digital proofs to speed-up project approval. Or produce monthly financial statements and manuals, where the consistency is assured from the first print to the last.

Outstanding environmental credentials

We set out to manufacture a range with the smallest possible carbon footprint. Each system incorporates the world's first high-grade fire retardant bio plastic, made from plant-derived organic resources. Where possible, recycled plastics have also been utilised, and the noise levels of each device are especially low. Carbon dioxide emissions are reduced, through the use of green materials and an environmentally conscious distribution strategy.

! The latest imageRUNNER ADVANCE C9000 PRO Series delivers quality in every area.

Create:

Eye-catching company brochures

Stunning mailpieces

On-demand digital proofs

Financial statements

Business cards

High quality business reports
